List of abbreviations and formula symbols

AC	Accuracy class
AG_o	Upper response pressure group
AG_u	Lower response pressure group
BV	Breather valve
GPR	Gas pressure regulator
HDS	High-pressure spindle
K_G	Valve flow rate coefficient
p	Pressure
p_d	Outlet pressure
p_{df}	SRV closing pressure
p_{do}	SRV opening pressure
p_{ds}	Setpoint of the response pressure
$p_{ds\,o}$	Upper SSV response pressure
$p_{ds\,u}$	Lower SSV response pressure
$p_{f,max}$	Maximum closing pressure
PS	Maximum allowable pressure
p_u	Inlet pressure
Q_n	Standard volumetric flow rate
RE	Diaphragm assembly
RSD2	Throttle valve
SSV	Safety shut-off valve
SRV	Safety relief valve
SG	Closing pressure group
t_{Gas}	Gas inlet temperature
VS	Valve seat
w_d	Outlet gas velocity
w_u	Inlet gas velocity
$W_{ds\,o}$	Upper spring adjustment range (SSV)
$W_{ds\,u}$	Lower spring adjustment range (SSV)
Δp	Pressure difference from inlet pressure to outlet pressure
Δp_{wo}	Min. re-engagement difference between upper response pressure and normal operating pressure
Δp_{wu}	Min. re-engagement difference between lower response pressure and normal operating pressure
ρ_n	Gas density

*) KG value for natural gas

Application, characteristics, technical data

Application

Safety shut-off valve (SSV), direct-acting (operating without auxiliary power), for systems acc. to DVGW Code of Practice G 491 (A) and G 600 (A) (TRGI)
Can be used as an equipment component on gas consumption facilities as defined in Regulation (EU) 2016/426.
Can be used for the gases defined in DVGW Code of Practice G 260 / G 262 and neutral non-aggressive gases. (other gases on request)

Characteristics

- Integral pressure-tight version (IS)
- High flow rate capacity
- Open-air model

Type of models / Options (see page 13)

- With AV breather valve
- With electric position indicator SSV "Closed" via Reed contact
- With SSV electromagnetic remote release when power is applied or in case of power failure
- With SSV manual release
- Oxygen model
- Hydrogen version
- Coating with epoxy resin in RAL colors

Response pressure groups

Upper response pressure group AG_o in command area w_{dso}	AG_o
50 mbar to 100 mbar	10
> 100 mbar to 500 mbar	5
> 500 mbar	2.5

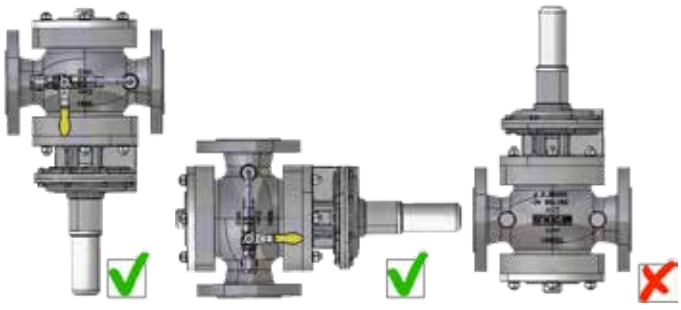
Lower response pressure AG_u in command area w_{dsu}	AG_U
10 mbar to 30 mbar	20
> 30 mbar to 50 mbar	10
> 50 mbar	5

Technical data

Type	S 100
Model	Integral pressure-tight (IS)
Max. allowable pressure PS	8 bar
Max. inlet pressure $p_{u,max}$	8 bar
Nominal width	DN 25, DN 40, DN 50, DN 65, DN 80, DN 100, DN 125, DN 150, DN 200
Connection type	DIN EN 1092 PN 16 flanges ASME - B16.5 flanges Class 150 RF
Material Housing / actuator housing/ control device housing	 Al cast alloy
Corrosivity category C1 to C5-I C5-M	DIN EN ISO 12944-2 without additional coatings an epoxy resin coating is recommended (see page13)
Temperature range, Class 2 (operating/ambient temperature)	-20°C to +60°C
Function, strength, and tightness to **CE mark acc. to PED/ PIN number**	DIN EN 14382 CE-0085-AQ0880
Ex protection	The mechanical parts of the device do not have any potential ignition sources of their own and therefore do not fall within the scope of ATEX 95 (94/9/EC). Electrical components fitted to the device comply with the ATEX requirements.

Preferred installation position

The gas pressure regulators S100 shall be installed in the pipeline preferably in horizontal position.
For all nominal widths, the direction of flow is indicated by an arrow on the housing.



Overhead installation position
only after consultation
with Medenus GmbH

Note: Observe the following documents in relation to installation, start-up, and maintenance:

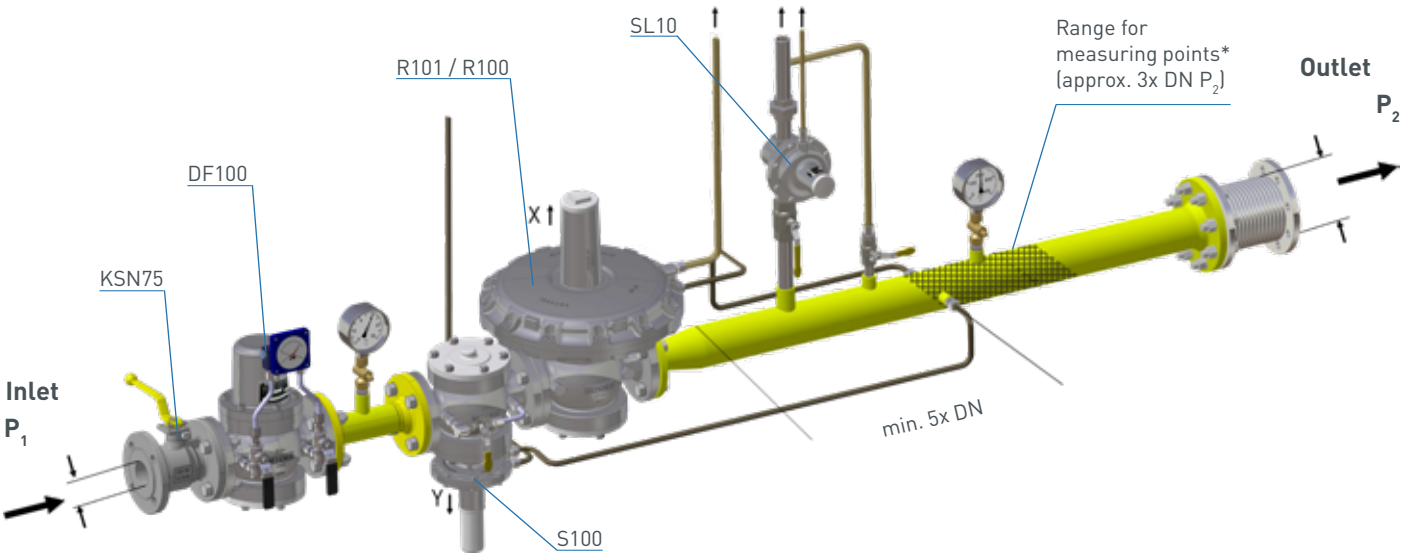
- DVGW - work sheets G 491 and G 600
- Operating and Maintenance Instructions S100

© 11.2023_02

Structure and function

The safety shut-off valve S 100 shuts off the gas flow when the outlet pressure in the regulating section exceeds or falls below a certain response pressure. For this purpose the outlet pressure is monitored by the SSV control device via a separate measurement line.
As a function of the change in pressure, the diaphragm in the control device is raised or lowered. When the outlet pressure in the regulating section falls below the lower switch-off point or exceeds the upper switch-off point, the switch socket connected to the SSV diaphragm will move to the corresponding disengaging position, the balls of the engaging mechanism will release the SSV screw spindle and the closing spring will press the SSV valve plate against the valve seat. The SSV actuator shuts off the gas flow gas-tight.
The SSV can only be opened by hand and engaged in the open position. To do so, the outlet pressure at the measuring point must be lowered below the upper response pressure or raised above the lower response pressure by at least the re-engaging differential amount (Δp).
The SSV can, except where otherwise stipulated in specific national legislation, be used in either functional class A (with diaphragm rupture protection) or B (without diaphragm rupture protection).
There is also the option of using a remote display for the SSV position "CLOSED" and a manual and remote release when power is applied or in case of power failure.

Installation example



*) Recommended max. velocity at the measurement line port 25 m/s

*) Standard spring

**) If the control device is set up simultaneously for the upper and lower set pressure (functional class A) the difference between the setpoints of the upper and lower response pressure (p_{dso} and p_{dsu}) and the outlet pressure pd must be at least "Δp_{wo} + 10%" or "Δp_{wu} + 10%". Otherwise it cannot be guaranteed that the control device will re-engage.

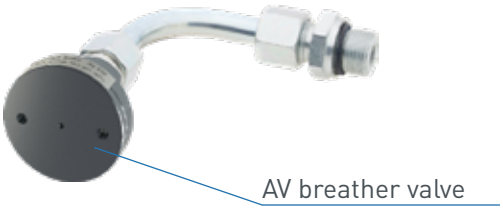
Types of models / Options

AV breather valve

The AV breather valve is used as for securing the installation room against inadmissible escape of gas from diaphragm comparator compartments of safety shut-off valves. In case of a defect, the impermissible escape of gas into the surrounding atmosphere is limited to a maximum of 30l/h (air).

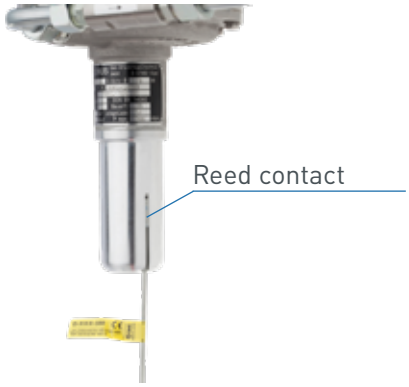
It also serves as a substitute for an expensive and complex installation of breather lines.



(Option not available for hydrogen version H_2)

Reed contact

Reed contacts are used to monitor the position (closed or open position) of the safety shut-off valve via remote display.



SSV manual and remote release

The direct-acting safety solenoid valve is used as electromagnetic remote release for closing the safety shut-off valve when power is applied or in case of power failure.

Epoxy resin coating in RAL colors

To protect the gas pressure regulator from external influences, starting from a corrosivity category C5-M we recommend an epoxy resin coating.

Types of models

Oxygen model O_2

Hydrogen version H_2 (with helium leak test)

The Medenus gas pressure regulators are suitable for use with hydrogen as a medium up to a proportion of 100%. Further information can be found in the special edition (10/2019) of gwf Gas+Energie and on our homepage at (www.medenus.de)

© 11.2023_02

Design

Device selection

Selection of the SSVs from the SSV control device table (page 8)
Note: Recommended upper SSV response pressure $p_{ds\,o}$ < 500 mbar + p_{ds}

Note: When selecting springs, AG_o and AG_u must be observed. The possible minimum and maximum response pressures are calculated as follows:
$p_{dso\ min/max} = p_{ds\,o} \bullet (1 \pm AG_o / 100)$

$p_{dsu\ min/max} \bullet (1 \pm AG_u / 100)$

Checking the gas velocities

$w = 380 \bullet Q_n / (DN^2 \bullet p_{abs})$

Note: The factor 380 refers to an operating gas temperature from approx. 15°C to 20°C. For other temperatures, the velocity must be corrected as follows: $w_{corr} = w \bullet (t_{gas} + 273.15) / 290$

Recommended max. gas velocity at the inlet flange:
50 - 70 m/s Lower value for redirections upstream of the SSV

Example:

MDR with FD 914 (440-770 mbar) AG_o10
set to $p_{ds\,o}$ = 700 mbar
and FE 904 (110-150 mbar) AG_u5
set to $p_{ds\,u}$= 130 mbar

$p_{dso\ max} = 700 \bullet (1 + 10 / 100) = 770$ mbar
$p_{dso\ min} = 700 \bullet (1 - 10 / 100) = 630$ mbar
$p_{dsu\ max} = 130 \bullet (1 + 5 / 100) = 136.5$ mbar
$p_{dsu\ min} = 130 \bullet (1 - 5 / 100) = 123.5$ mbar

Inlet and outlet nominal width of the pipeline according to the selected device: 80 mm
Selected widening of outlet pipeline: 200 mm

$w_u = 380 \bullet 2500 / (80^2 \bullet 6) = 24.7$ m/s

The device selected in the example of nominal width DN 80 can be operated under these conditions.

Determining the upper response pressure

Outlet pressure P_d (mbar)	Upper response pressure W_{dso}
⩽200	P_d +100 mbar
>200 - ⩽800	P_d x 1.5
>800 - ⩽1600	P_d x 1.3
>1600	P_d +500 mbar

Pressure loss formula

Calculation pressure absolute (p_u +1 bar) = $p_{u,abs}$

$$\Delta p = \left(\frac{Q_n}{K_G}\right)^2 \times \frac{1000}{p_{u,abs}}$$

Properties of gases

- for natural gas (ρ_n = 0.83 kg/m³; t = 15°C)
