Application, Characteristics, Technical Data

Application

Safety relief valve (SRV), direct-acting (operating without auxiliary power), for systems acc. to DVGW work sheets G 491 (A) and G 600 (A) (TRGI)

Can be used as an equipment component on gas consumption facilities as defined in Regulation (EU) 2016/426.

Can be used for the gases defined in DVGW work sheet G 260 / G 262 and neutral non-aggressive gases.

(other gases on request)

Characteristics

- Integral pressure-tight version (IS)
- Class A
- Position-independent installation
- High level of response accuracy
- Open-air model

Type of model / Options (see page 10)

- AV breather valve
- Oxygen model
- Hydrogen model
- Coating with epoxy resin in RAL colors

Technical data

Type	SL 10
Model	Integral pressure-tight (IS)
Max. allowable pressure PS	Standard: 5 bar (thread-sealing) Option: 8 bar, (Ermeto-Fitting, acc. to DIN 30690-1)
Max. inlet pressure $p_{u,max}$	3.5 bar
Nominal width	Rp 1" (DN 25), Rp 1½" (DN 40), Rp 2" (DN 50) (NPT thread on request)
Type of connection	Internal thread acc. to EN 10226-1
Material	Housing / actuator housing Al - cast alloy
Corrosivity category	DIN EN ISO 12944-2 C1 to C5-I C5-M without additional coatings an epoxy resin coating is recommended (see page10)
Temperature range, Class 2 (operating/ambient temperature)	-20°C to +60°C
Accuracy class AC	5
Closing pressure group SG	10
Function, strength and tightness	DIN EN 33821
CE mark acc. to PED/ PIN number	CE-0085-AQ0879
Ex protection	The mechanical parts of the device do not have any potential ignition sources of their own and therefore do not fall within the scope of ATEX 95 (94/9/EC). Electrical components fitted to the device comply with the ATEX requirements.

Preferred installation position

The gas pressure regulators S10 shall be installed in the pipeline preferably in horizontal position. For all nominal widths, the direction of flow is indicated by an arrow on the housing.

Installation upside down only after consultation with Medenus GmbH

Note: Observe the following documents in relation to installation, start-up, and maintenance:

- DVGW - work sheets G 491 and G 600
- Operating and Maintenance Instructions SL 10

Structure and function

The spring-loaded safety relief valve SL 10 is used for reducing short-term pressure surges upstream of gas consumption systems or preventing an inadmissibly high pressure increase due to escaping gas, and is intended to protect downstream system components from excessive pressure levels.

The safety relief valve is composed of the actuator housing and the "control device" functional unit. In the closed position, the gas flows into the actuator housing in the direction of the arrow. The internal measurement line port is used to pass the outlet pressure to be regulated to the bottom of the main diaphragm of the safety relief valve. It compares the actual value with the command variable preset by the force of the setpoint spring. The setpoint required in each case is set via the setting screw. When the setpoint is exceeded, the measuring unit will lift the actuator, allowing the gas to escape via the blow-off line. If the actual value falls below the setpoint, the measuring unit will close the actuator again automatically.

Installation example

*) Recommended max. velocity at the measurement line port 25 m/s

Operating and Maintenance Instructions SL 10

For all nominal widths, the direction of flow is indicated by an arrow on the housing.

*) Threaded pipe connections to DIN EN ISO 8434-1 (DIN 2353)

Types of Models / Options

AV breather valve

The AV breather valve is used to secure the installation room against inadmissible escape of gas from diaphragm comparator compartments of safety shut-off valves. In case of a defect, the impermissible escape of gas into the surrounding atmosphere is limited to a maximum of 30l/h (air).

It also serves as a substitute for an expensive and complex installation of breather lines.

(Option not available for hydrogen version H₂)

AV breather valve

Epoxy resin coating in RAL colors

To protect the safety relief valves from external influences, starting from a corrosivity category C5-M we recommend an epoxy resin coating.

Types of models

Oxygen model O₂

Hydrogen model H₂ (with helium leak test)

The Medenus gas pressure regulators are suitable for use with hydrogen as a medium up to a proportion of 100%. Further information can be found in the special edition (10/2019) of gwf Gas+Energie and on our homepage at (www.medenus.de)

Properties of Gases

without acceptance test certificate	-				
with acceptance test certificate	WAZ			WAZ	
Special model	So*				So
- Coating with epoxy resin in RAL colors - Oxygen model					

We recommend, for systems with regulators
up to DN 100 our SL10-Rp 1"
up to DN 150 our SL10-Rp 1 1/2"
up to DN 200 our SL10-Rp 2"

- *) e.g.:
- Coating with epoxy resin in RAL colors
 - Oxygen model

In every selection group, there is only one option that can be selected.

THE MEDENUS PLUS

10 reasons for good business relations

1. Consultancy expertise and quality standards developed over decades
 2. Broad and proven standard range of feedback controllers
 3. Modern, fast and efficient production for series products and for individual orders
 4. Customer-specific design of pressure regulators and vacuum regulators and special designs
 5. Guaranteed deadline compliance with a delivery deadline guarantee
 6. Fast response time in all matters
 7. Sufficiently large parts storage for production and spare parts
 8. Customer-specific theory & practice training courses
 9. Modular design right across the entire product range to facilitate optimized handling of spare parts
 10. Made in Germany
